1 Introduction

The Ride Quality (RideQC) web application is used to analyze inertial profiler data collected on TxDOT highways after construction is completed, or after the base layer is finished.

Prior to invoking these Ride Quality Specifications, the user should read the Guidance Document from the Construction Division to determine the proper pay schedule for the type of construction work to be done. The user should also read the specification and the associated Test Method Tex-1001-S.

The contractor is responsible for delivering profile data files that conform to the file format specified in Test Method Tex-1001-S. The contractor must also deliver a table indicating filenames and pavement locations for each file. These data files will be used as input to the RideQC web application. Output of the RideQC web application will provide the International Roughness Indexes (IRI's) for every 0.1 mile section of the paving operation along with the associated bonus or penalty payments. The web application will locate any areas of localized roughness (bumps or dips) on the pavement's surface which will have penalties associated with them if the user has selected a penalty other than \$0.00.

2 Functionality

2.1 Brower Compatibility

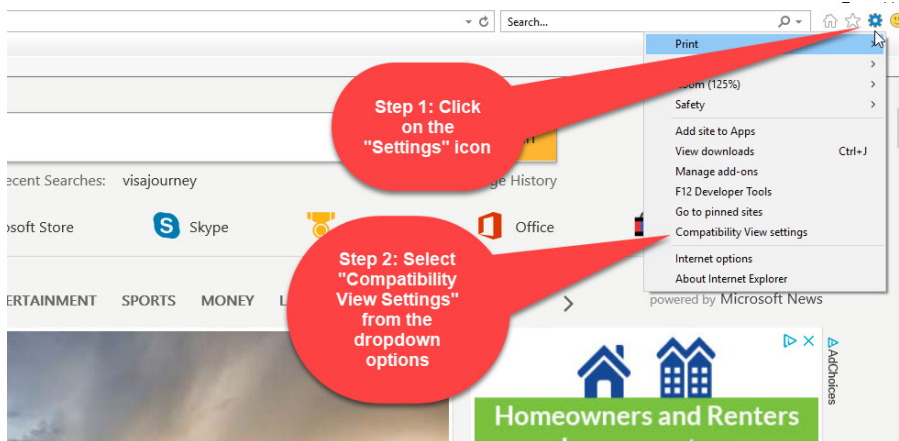

Google Chrome is the recommended web browser to access Ride Quality Web Application.

The Internet Explorer (IE) 11 web browser can be used on the user's computer with setting updates. (The Ride Quality Web Application is not supported on any other web browser.) When using IE 11, prior to accessing Ride Quality Web Application, the user must update "Compatibility View Settings" by entering the value "state.tx.us" in IE 11 settings window. This step will ensure no error message is received while accessing the application.

Instructions to update "Compatibility View Settings":

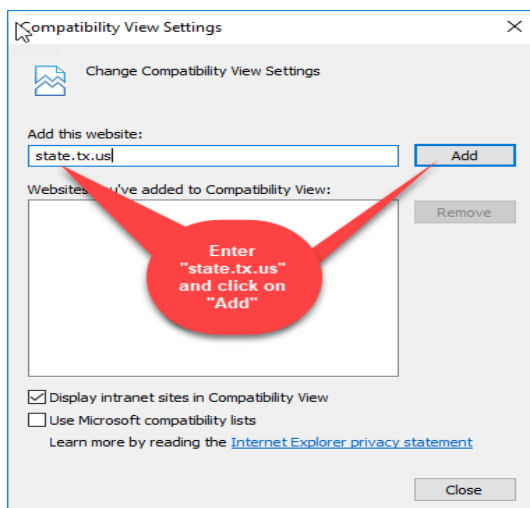

Step1: Open IE 11 and click on the "settings" icon.

Step2: Select "Compatibility View Settings" from the dropdown options.

Step 3: Enter "state.tx.us" in the add this website section and click "add".

Step 4: Close the window.

2.2 Accessing Ride Quality Web Application

The Ride Quality Launch page is available at the following URL: <http://204.64.21.185/RideQC>. No authentication is needed to access the application. When you browse to Ride Quality Launch page, the Disclaimer Page will be displayed:

Ride Quality - Smoothness Specification

THIS END USER LICENSE AGREEMENT ("AGREEMENT") IS A LEGAL AGREEMENT BETWEEN YOU OR THE ENTITY YOU REPRESENT ("YOU"), AND THE TEXAS DEPT. OF TRANSPORTATION ("TxDOT") STATING THE TERMS AND CONDITIONS THAT GOVERN YOUR USE OF THIS WEB APPLICATION ("LICENSED APPLICATION"). PLEASE READ THIS AGREEMENT CAREFULLY AS THESE PROVISIONS AFFECT YOUR RIGHTS AND LIABILITIES UNDER THE LAW AND SET OUT THE TERMS UNDER WHICH TxDOT MAKES THE LICENSED APPLICATION TO YOU. BY USING THE LICENSED APPLICATION, YOU ARE INDICATING THAT YOU AGREE TO BE BOUND BY AND COMPLY WITH THE TERMS AND CONDITIONS SET FORTH IN THIS AGREEMENT. IF YOU DO NOT AGREE TO THESE TERMS AND CONDITIONS, DO NOT USE THE LICENSED APPLICATION.

Scope of License: Subject to the terms and conditions of this Agreement, TxDOT hereby grants to you a limited, non-transferable, non-sub licensable, non-assignable and revocable license to use the Licensed Application solely for your own use. You acknowledge and agree that this Agreement is between you and TxDOT. TxDOT reserves all rights not expressly granted to you herein. All title and copyrights in and to the Licensed Application (including but not limited to any images, photographs, animations, video, audio, text, and "applets," incorporated into the Licensed Application), the accompanying printed materials, and any copies of the Licensed Application, are owned by TxDOT.

Restrictions: This Agreement does not allow you to copy, decompile, reverse engineer, disassemble, attempt to derive the source code of, modify, or create derivative works of the Licensed Application, or any updates or upgrades, or any part thereof. Any attempt to do so is a violation of TxDOT's rights

Proprietary Right: TxDOT owns all rights, title and interest in, and to, the Licensed Application, and, except for the limited license granted to you herein, nothing in this Agreement shall be construed to restrict, transfer, convey, encumber, alter, impair or otherwise adversely affect TxDOT's ownership or proprietary rights therein. You may not copy, decompile, or reverse engineer any of the products featured in the Licensed Application.

Fees: TxDOT agrees to waive the license fee but reserves the right to charge a fee by giving electronic notice on TxDOT's Web site.

Use of Licensed Application: TxDOT is not responsible for providing upgrades, notification of upgrades, modifications, or corrections to the Licensed Application. TxDOT does not make any warranties or representations regarding the use of the Licensed Application, including but not limited to the content of the Licensed Application, the suitability of the Licensed Application for your use, the information obtained by you from using the Licensed Application, or the compatibility of the Licensed Application with your computer. You accept the Licensed Application "as-is" with all possible faults, and TxDOT is not liable for any incidental, consequential, or special damages of any kind. You agree to comply with all federal, state and local laws, statutes, ordinances, rules and regulations, and the orders and decrees of any court or administrative body that affect the performance of this agreement. Usage of this Licensed Application is restricted to TxDOT projects.

Termination: TxDOT reserves the right to immediately terminate permission to use the Licensed Application to anyone or everyone at TxDOT's sole discretion.

Legal Construction: If any of the provisions of this agreement are held unenforceable, the remaining provisions will be construed as if the unenforceable provision had never been included. By using this Licensed Application, you warrant that you or your firm have the authority to enter into this agreement, and you or your firm are deemed to have signed the license agreement to the extent as if your written signature were contained on this agreement.

Profiler Data Files

1 File Headers 6

2

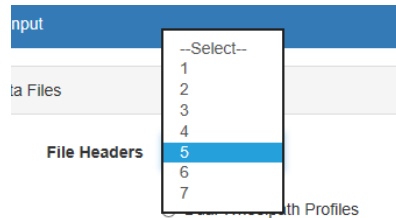

☐ Dual Wheelpath Profiles
☒ Single Wheelpath Profiles

3

4

5

1: File Headers: Drop down box displays values 1 through 7, If user selects 6 or 7 the system displays the following message in a dialogue box “This value is normally set to 5. Five lines is the standard number of lines in a profile dataset.”

The screenshot shows a web form with a dropdown menu labeled "File Headers". The dropdown is open, showing options from 1 to 7. Option 5 is currently selected. The form also includes fields for "Input" and "Data Files".

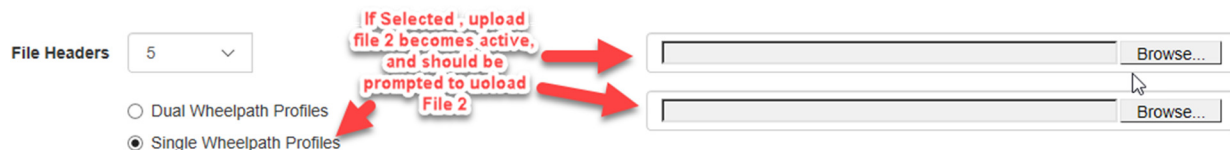

2: Dual Wheelpath Profiles: For data files to be processed with both left and right wheel paths in the same file select the Dual Wheelpath Profiles option (this is already set as the default). If selected, browse 2 becomes inactive.

The screenshot shows the "File Headers" dropdown set to 5. Below it, the "Dual Wheelpath Profiles" radio button is selected. A red arrow points from the text "If selected, Browse 2 becomes inactive" to the "Browse..." button of the second file upload field, which is disabled.

3: Single Wheelpath Profiles: To load data files containing only one wheel path per file, select the Single Wheelpath Profiles option. If Selected, browse 2 becomes active, and should be prompted to upload File 2. Then select a file for each wheel path for a total of two files showing. The first file should correspond to the left wheel path, and the second file the right wheel path.

Notes: Ensure both left and right profile files are specified before computing

The screenshot shows the "File Headers" dropdown set to 5. Below it, the "Single Wheelpath Profiles" radio button is selected. A red arrow points from the text "If Selected, upload file 2 becomes active, and should be prompted to upload File 2" to the "Browse..." button of the second file upload field, which is now active.

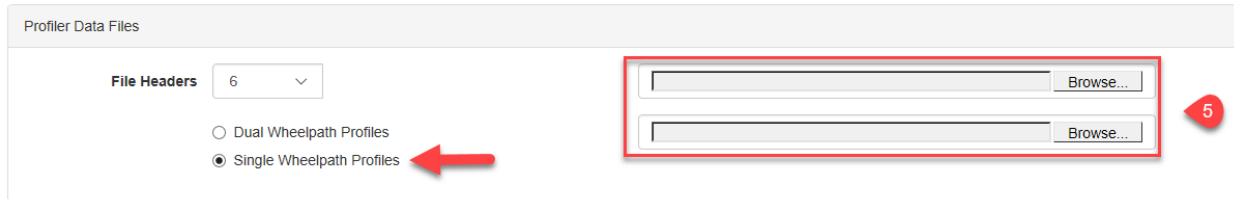

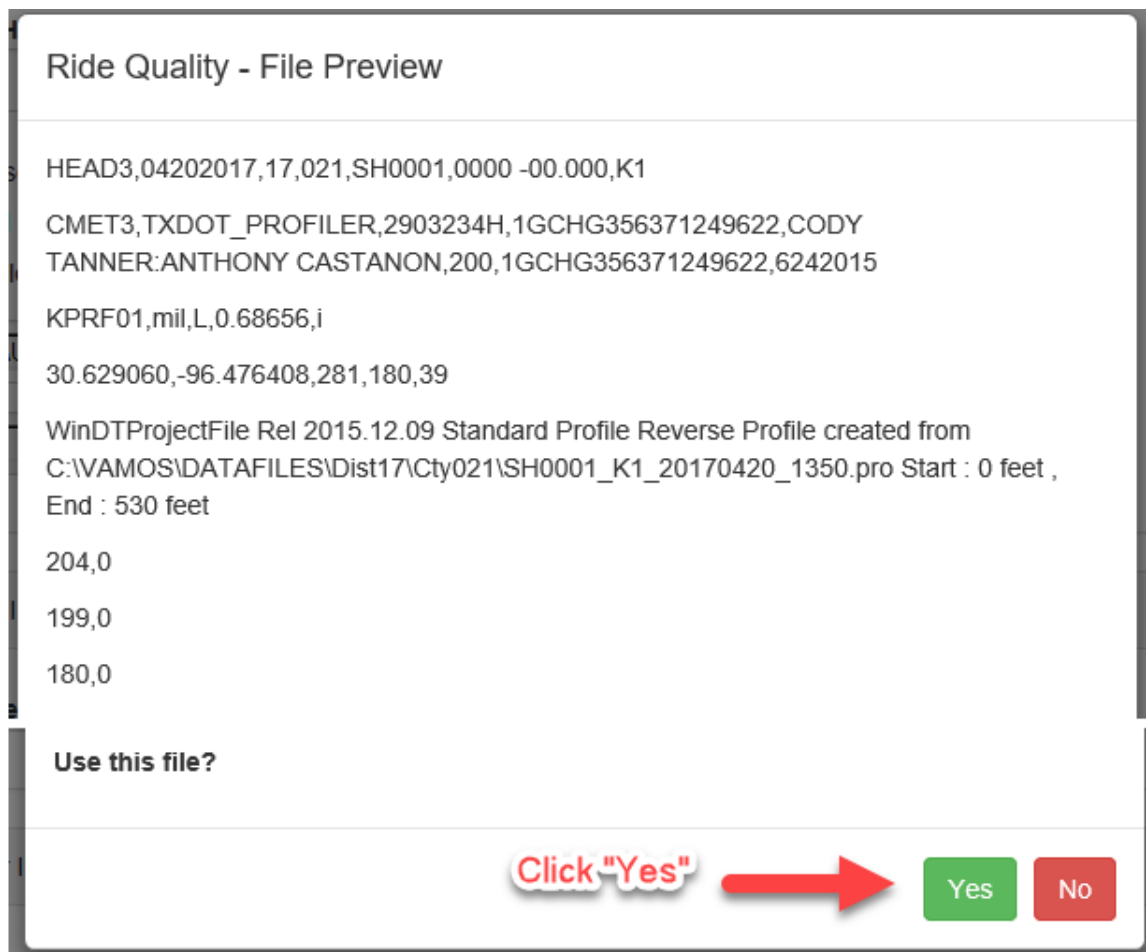

4: Browse 1: User can only upload a .PRO file as the input. If any other file/format is input by the user the system will generate an error message. The input file will populate the user information fields extracted from the input file. **Notes:** Business Name will be a manually entered field and is not a part of the input file.

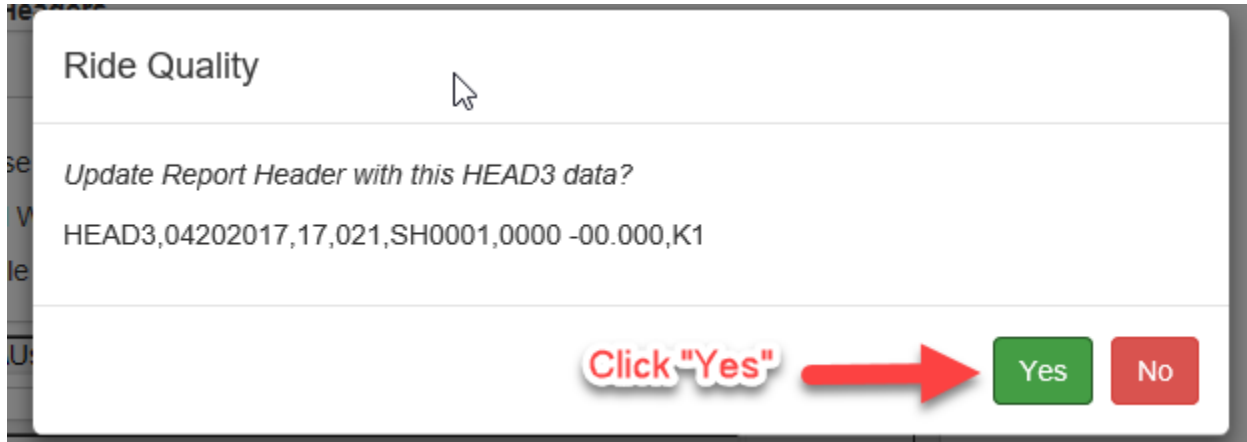

The screenshot shows the "File Headers" dropdown set to 5. Below it, the "Dual Wheelpath Profiles" radio button is selected. A red box highlights the "Browse..." button of the first file upload field, with a red circle containing the number 4 next to it.

5: Browse 1 & 2: User can only upload a .PRO file as the input. If any other file/format is input by the user the system will generate an error message. The input file will populate the user information fields extracted from the input file. This field is inactive unless “Single WheelPath profiles” is selected. This populates the user Information fields that are extracted from the input file. All fields are required.

Note: Business Name will be a manually entered field and is not a part of the input file

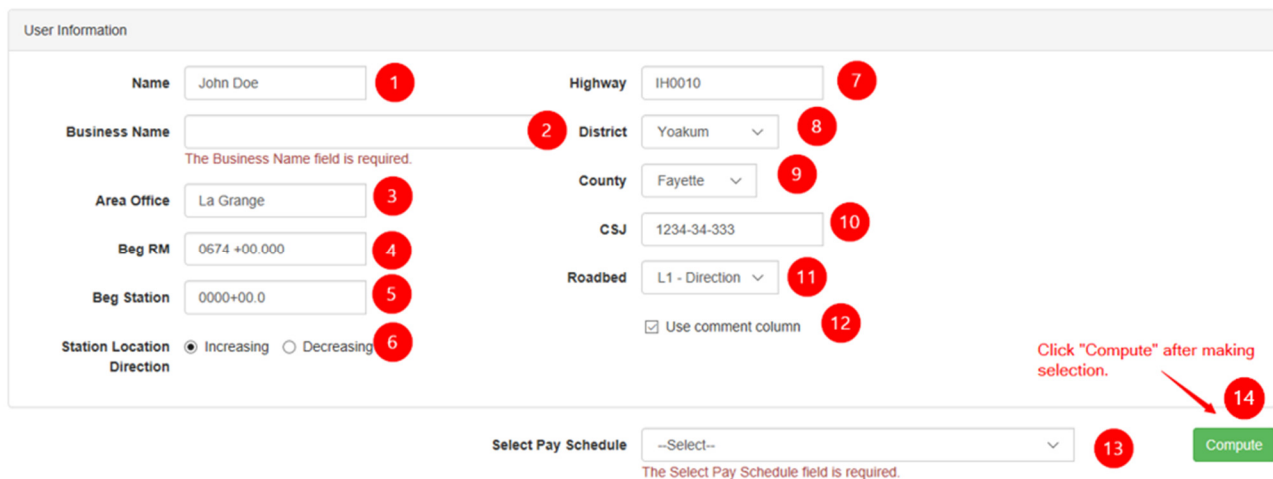

After the file is selected the data file is scanned for the required header information and a prompt appears to update the user information area.

2.3.2 User Information Section

The user must manually set those fields which are not in the data file header including Beg Station, CSJ, Name, Area Office, and Phone. If a Beg Station is inserted it must be in the format shown. All fields are mandatory.

1: Name: The name of the operator who ran the profile in the field. Populated from the header of the input file, editable field, mandatory, and cannot be left blank.

2: Business Name: This will be a manually entered field and is not a part of the input file. This field is editable, mandatory, and cannot be left blank.

3: Area Office: Editable field, mandatory, and cannot be left blank.

4: Beg RM: Editable field, mandatory, and cannot be left blank.

5: Beg Station: The Beg Station field sets the first station number and it may happen that if a Decreasing direction is selected the program may flag an error during processing that negative station locations are being created. To correct this either set the Beg Station field to a higher value or change the direction. Editable field, mandatory, and cannot be left blank.

6: Station Location Direction: Increasing/Decreasing – Select either/or. Mandatory.

7: Highway: Must be in PMIS format of 2 letters followed by 4 numbers like **IH0010** with no spaces. Editable field, mandatory, and cannot be left blank.

8: District: Dropdown list of all the districts in Texas, editable field, mandatory, and cannot be left blank.

9: County: List of counties based on the district selected. Editable field, mandatory, and cannot be left blank.

10: CSJ: Editable field, not mandatory, report will be computed. CSJ information must be correct/accurate to load the Ride Quality report into Site Manager.

11: RoadBed +Direction: Drop down contains the following (K1-K9,K0,R1-R5,L1-L5,A1-A3,X1-X3), editable field, mandatory.

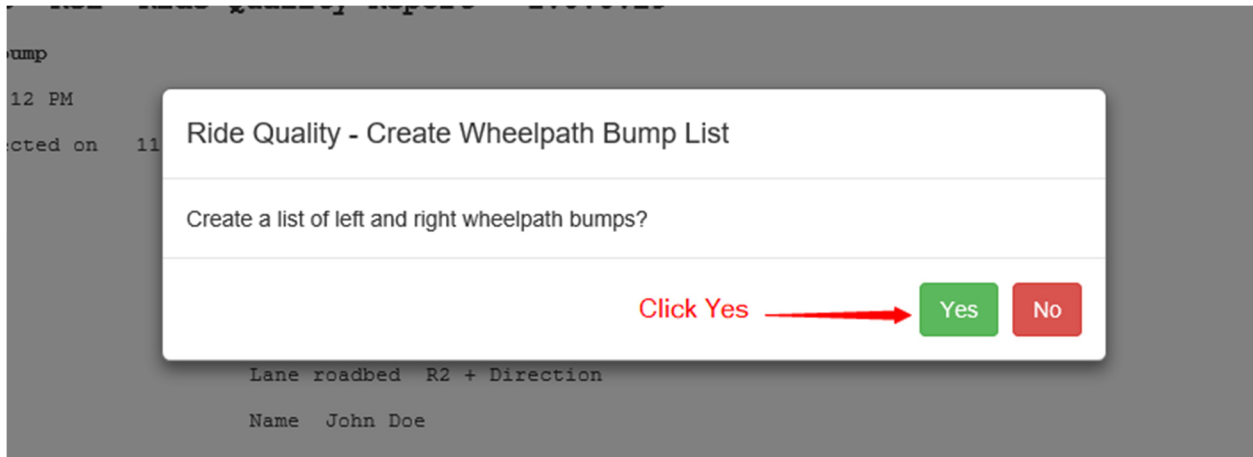

12: Use Comment Column: Checked marked by 'default' when an end user opens the Ride Quality web app. If comment column is left "unchecked" the ride quality results will not take into account any sections which have been marked as "leave-outs" and this will cause a difference in the calculations.

13: Select Pay Schedule: Drop down contains the following five items:

- Spec 585 - Schedule 1 -\$500/bump
- Spec 585 - Schedule 2 - \$250/bump
- Spec 585 - Schedule 3 - no bump fine
- Item 247 - 2014 Spec
- SS 3012

Editable field, mandatory. This dropdown option can be selected at any point in time either before or after file upload. However, you cannot compute the entries until this item is selected. A full discussion of each pay schedule is given in Appendix A -page 15 of this document.

14: “Compute” Button: After completing the user information section, the user can click the “Compute” button. After a few seconds of initial processing the user is prompted about creating a list of left and/or right wheelpath bumps. Clicking either button resumes the data processing and the results will appear in the Show RTF tab that will be displayed in a new frame on the existing web page.

2.3.3 Report Generation: Bonus/Penalty Report

A similar RTF format of the Bonus/Penalty report will be produced. The report will provide the user options to navigate between Show RTF, Show Map, and Show Graph tabs. The report will also provide options to Download and Print.

1: Show RTF: The report is divided into four sections (see the complete sample report generated from the sample data file in Appendix B).

- **Header Section** displays the information about the data collected and location information:

00.6124	32+33.7	Bump	26.8	.23	-\$ 500
00.6203	32+75.4	Dip	1.5	-.16	-\$ 500

Bumps/dips detected 11

Bump Fines -\$ 5500

*Notes: Bumps closer than 5 feet are not shown or counted.

Bump widths shown are not a true indication of the actual bump width but rather the portion of the bump equal to or exceeding 0.1505 inches from the moving average of the profile.

Bumps not calculated on margins of profile where filtering is tapered on and off.

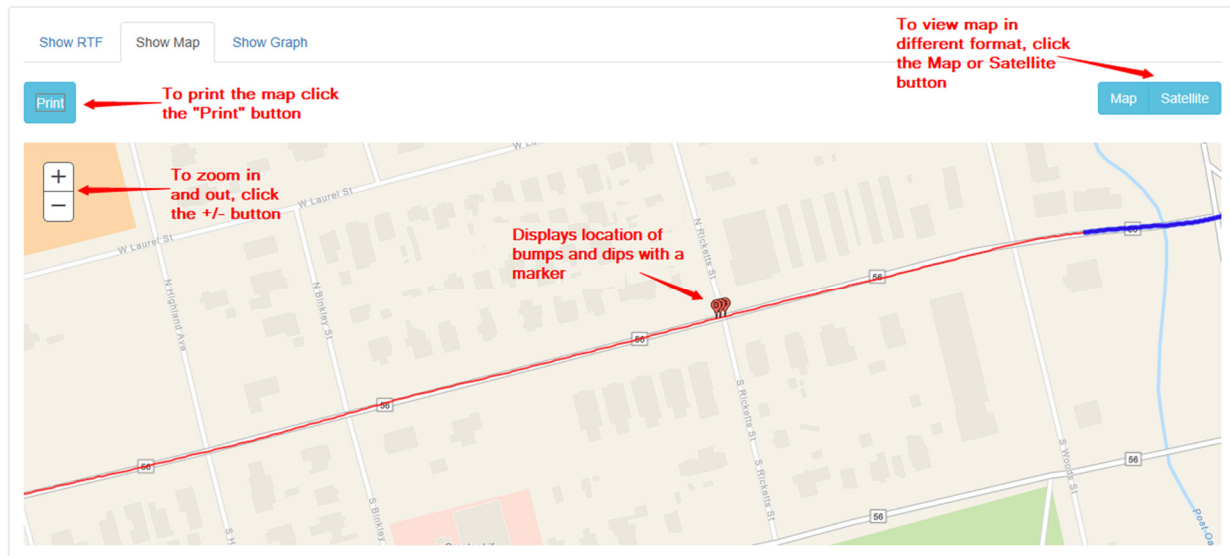

00.0000 0+00.0 *** Leave Out Start

00.0514 2+71.5 *** Leave Out End Total Leave Out = 271.5ft

2: Show Map

Show map displays the location of the bumps and dips with a marker. Placing the mouse cursor over any point on the map will show information at that point.

- Map View

- Satellite View

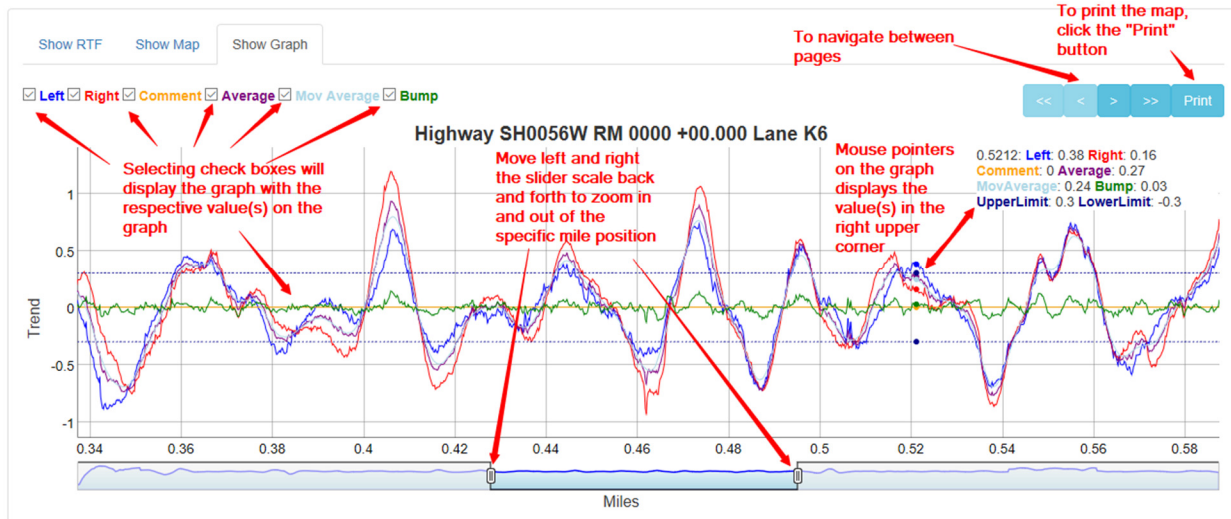

3: Show Graph:

Ride Quality User Guide

Graphical display of the profiles including bumps and dips. To view the graph, click on the “Show Graph” tab on the web page. Each profile is displayed as recorded, as well as derived profiles. Bumps are shown as the residual derived profile. Users can choose an area of interest with a draggable slider scale at the bottom of the graph. Scroll controls at the upper right allow setting the amount of the profile to view as well as the location.

Appendix A: Pay Schedule Comparison

General Rules for All Specifications

If bump penalties are omitted so are IRI bonuses. Schedule 3 is the only schedule which does not penalize for poor ride scores. Schedules 1 and 2 penalize for poor ride scores and when the max IRI is exceeded "Corrective Action" is indicated.

For Item 585 the bump/dip penalties are decided by the pay schedule used

Schedule	Bump Penalty Amount	Bump Gap Value (ft)	Bonus paid in sections containing bumps	Penalty for high IRI's	Corrective work flagged
585 - Schedule 1	\$500	5	YES	YES	YES
585 - Schedule 2	\$250	5	YES	YES	YES
585 - Schedule 3	\$0	5	NO	NO	NO
Item 247 – 2014 Spec	\$0	5	NO	NO	YES
SS 3012	\$704	5	YES	YES	YES

Definitions, Acronyms, and Abbreviations

The following table identifies commonly used abbreviations, nomenclature, and definitions used for this project.

Acronym or Term	Definition
Bump	A bump is calculated by taking the average profile minus the moving average profile, and any points exceeding +0.1505 inches are considered bumps.
CSJ	Control-Section-Job numbers are numbers assigned to all on-system public highways in Texas. The control number is assigned to a stretch of highway that often breaks at a county line or a major highway intersection, river or stream, but can also break at any convenient location. The section number is a number within a specific control and is usually assigned sequentially from the beginning of the control. The job number is the sequential number for any type of construction project (bridge, paving, etc.) that may have ever occurred on that section of highway. The CSJ is a unique, identifying nine-digit number for a project.
Dip	A dip is calculated by taking the average profile minus the moving average profile, and any points less than -0.1505 inches are considered dips.
ESRI GIS	Environmental Systems Research Institute Geographic Information System.
IRI	International Roughness Index.
Item 247 Flexible Base	Construct a Foundation Course composed of Flexible Base.
Item 585 - Ride Quality of Pavement Surfaces	Specifications that assist TxDOT district staff with managing and proper documentation of Ride Quality data and corresponding bonus/penalties.
PSI	Present Serviceability Index – Scale from 0-5 calculated from IRI scores, where low IRI scores give a high PSI.
RFT	Rich Text Format.
TxDOT	Texas Department of Transportation
TEX-1001-S	(See Appendix A, TEX 1001-S) The reporting interval (distance between successive relative elevation measurements) in inches or meters- the maximum reporting interval is 2 in (0.0508 m)
